BAGA Water Technology

The cutting edge in water treatment

Clean water is becoming an increasingly important issue for many people in the stressed environments of today. Environmental requirements are sharpened and threshold values are increased. Our goal is to provide equipment meeting these demands, offering the highest degree of purification, efficiency and reliability.

BAGA Water Technology specializes in equipment and solutions for water and sewage water treatment. We develop, supply and market equipment and solutions used in the treatment of domestic, municipal and industrial waste water.

BAGA offers complete solutions from design to delivery. Through extensive inhouse research and development, also using our international network of water treatment specialists combined with a deep knowledge and experience, we are able to present innovative and uncomplicated solutions. BAGA offers a line of patented and reliable systems using the latest cutting edge technology in water treatment.

We offer extensive high tech maintenance support such as remote gsm monitoring, service contracts and telephone support to ensure customer security.

Environmental awareness is a natural part of our line of business. With this commitment and the use of frontline technology we hope to be able to help reducing the pressure on the environment that we all share.

BAGA was founded in 1992 and is based in Karlskrona, Sweden, with sales offices in Gothenburg and Stockholm. Sales in the Nordic countries are attended to by our Swedish sales force together with an Estonian subsidiary. Export sales in other countries are carried out by our export department.

Water Technology
BAGA

A broad range of products and services

BAGA offers a wide range of products and services. We develop, supply and market equipment and solutions used in the treatment of domestic, municipal and industrial water and waste water.

Septic tanks

BAGAs patented septic tank is a completely unique product, producing a 100 % particle free water. It has a number of advantages such as an integrated pump chamber and is easily converted into the BAGA Easy waste water plant.

Waste water plants

We design and market waste water plants that meets the ever increasing requirements and threshold values. BAGA water treatment plants gives you a number of advantages such as a high degree of purification, serviceability and low energy consumption. BAGA waste water plants are available in standard sizes from 1 – 500 households or as large scale customized systems.

Potable water

We design and market water plants for both ground and surface water. Our water plants using UF-membranes guarantees bacteria free water.

Industrial water treatment

We can offer a number of different waste water techniques for industrial applications such as manufacturing industries, dairies and slaughterhouses. As requirements can be very different and applications often are a bit unique, BAGA always go all the way from feasibility study and project through to delivery of a turn-key system.

Ultra Membranes

BAGA is currently developing the ultra filter technology. Our sewage plants using Ultra Membrane technology are able to produce a completely bacteria free water and are also used in industrial water purification. All our waste water and industrial water plants can be equipped with UF-Membranes.

Pumps

BAGA offers a line of high quality wastewater and drain pumps suitable for most applications in water treatment.

Pump stations

A complete line of pump stations. Everything from private household stations to stations for municipalities and industry. BAGA offers a complete line of standard or customized stations including pumps and automation.

Oil and fat separators, fuel and water tanks

BAGA offers a complete line of glass fiber tanks and separators. Tanks, Silos and Basins up to 3500 m³ for water reservoirs, flue gas systems, industrial farming and fish processing.

BAGA Water Technology AB is a company specialising on water technology. We have our own research and development department and hold a number of international patents. This reflects on the BAGA products keeping us at the cutting edge in water technology. We offer complete solutions, all the way from project to fully developed products including service agreements.

BAGA offers septic tanks, waste water plants (1 - 500) households, water plants, pumps, pumpstations, grease separators, oil separators, closed tanks and chemical tanks. The company is based in Karlskrona, Sweden with sales offices in Gothenburgh and Stockholm.
